

## Signature Pergola

Our very own Signature Pergola leads the outdoor structure world in design, functionality, craftsmanship and beauty. Our Signature Pergola can be constructed to meet your needs & create your perfect atmosphere. Using a rough sawn Cedar can give you a rustic look while our Smooth Cedar can give you a more refined look while keeping the beautiful look that only Cedar can give. You can also choose to go with a PT Pine to achieve your look and feel while being economical.

Each pergola has a Gusset attaching the Post to the above Entablatures. Each side of the Pergola has 2 Entablatures that run side by side and interlock to be flush with adjacent Entablatures. The Rafters are standard 2"x6" and are spaced 18". Above the Rafters are the Purlins which are standard 2"x4" and also spaced 18". Every layer and piece of wood is notched and screwed into place. This ensures a top quality product that will not bow, warp or twist. Boots can be added if the hardware at the bottom of the post is exposed.

As an added touch we do round the post corners, gussets and most other edges. Rafter tails can be customized for any shape.

SMOOTH CEDAR ROUGH CEDAR PT PINE

## Lounge Pergola

Our Lounge Pergola is a design all it's own. The concept here is to minimize the amount of rafters while increasing the amount of purlins for the top row. You will achieve more shade with this structure at a more affordable price and of course have a beautiful shade structure.

There are 4 sets of Entablatures opposite of each other that connect the post. Rafters above are standard to be 24" apart. Above the rafter we have the purlins which are 12" apart. The large amount of purlins is what gives this pergola its appeal with its large amount of shade.

This Pergola can be constructed out of either a Smooth Cedar, Rough Sawn Cedar or PT Pine.
